SEQUENCE FROM N.A. STRAINH-BOIStein-Friesian; Davey H.W., Ogg S.L., Husaini Y., Snell R.G., Korobko I.V., Mather I.H., Wilkins R.J.; Submitted (MAY-1997) to the EMBL/GenBank/DDBJ databases. SEQUENCE FROM N.A. TISSUE-Blood; Seyfert HM., Luethen F.; Submitted (MAR-1997) to the EMBL/GenBank/DDBJ databases. [4] CARBOHYDRATE-LINKAGE SITES. MEDLINE-95293916; PubMed=7775382; Sato T., Takio K., Kobata A., Greenwalt D.E., Furukawa K.; Sato T., Takio K., Kobata A., Greenwalt D.E., Furukawa K.; Sato T., Takio K., Kobata A., Greenwalt D.E., Furukawa K.; Sato T., Takio K., Kobata A., Greenwalt D.E., Furukawa K.; Sato T., Takio K., Kobata A., Greenwalt D.E., Furukawa K.; "Site-specific glycosylation of bovine butyrophilin."; J. Biochem. 117:147-157(1995). -!- FUNCTION: May function in the secretion of milk-fat droplets. It may act as a specific membrane-associated receptor for the association of cytoplasmic droplets with the apical plasma membrane. -!- SUBUNIT: Seems to associate with xanthine dehydrogenase/oxidase -!- SUBUNIT: Seems to associate with xanthine dehydrogenase/oxidase -!- SUBUNIT: Seems to associate with mammary tissue and secreted in association with the milk-fat-globule membrane during lactation. -!- SIMILARITY: Belongs to the immunoglobulin superfamily. BTN/MOG family. -!- SIMILARITY: Contains 2 immunoglobulin-like V-type domains. -!- SIMILARITY: Contains 2 immunoglobulin-like V-type domains.	F

SUBUNIT: Seems to associate with xanthine dehydrogenase/oxidase.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Expressed in mammary tissue and secreted in association with the milk-fat-globule membrane during lactation.

DEVELOPMENTAL STAGE: Expression increases during the last half of pregnancy and is maximal during lactation.

STMILARITY: Belongs to the immunoglobulin superfamily. BTN/MCG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: Contains 2 immunoglobulin-like V-type domains

-i- FUNCTION: LIGAND FOR THE T-CELL-SPECIFIC CELL SURFACE RECEPTOR ICOS. ACTS AS A COSTINULATORY SIGNAL FOR T-CELL PROLIFERATION AND CYTOKINE SECRETION; INDUCES ALSO B-CELL PROLIFERATION AND DIFFERENTIATION INTO PLASMA CELLS. COULD FLAY AN IMPORTANT ROLE IN MEDIATING LOCAL TISSUE RESPONSES TO INFLAMMATORY CONDITIONS, AS WELL AS IN MODULATING THE SECONDARY IMMUNE RESPONSE BY COSTIMULATING MEMORY T-CELL FUNCTION (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ishikawa K.-I., Nagase T., Suyama M., Miyajima N., Tanaka A., Kotani H., Nomura N., Ohara O., "Prediction of the coding sequences of unidentified human genes. X. The complete sequences of 100 new cDNA clones from brain which can code for large proteins in vitro."; DNA Res. 5:169-176(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A. Exp. Med. 178:2185-2192(1993).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Receptor involved in the costimulatory signal essention for Tymphocyte proliferation and interleukin 2 production, by binding CD28 or CTLA-4. May play a critical role in the early events of T cell activation and costimulation of naive T cells, such as deciding between immunity and anergy that is made by T cells within 24 hours after activation.

SUBCELLULAR LOCATION: Type I membrane protein.

SIBCELCITY: Expressed on activated B cells.

SIMILARITY: Contains 1 immunoglobulin-like C2-type domain.

SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;; L25606; AAA79770.1; U39456; AAC52334.1; U39462; AAC52334.1; U39462; AAC52334.1; U39463; AAC52334.1; U39466; AAC52334.1; U39466; AAC52336.1; U39466; AAC52336.1; U39464; AAC52336.1; U39466; AAC52336.1; U39464; AAC52336.1; U39464; AAC52336.1; U39465; AAC52336.1; U39466; AAC52336; AAC52336; U39466; AAC52336; U39466; AAC52336; U39466; AAC52336; U

TISSUE SPECIFICITY: Ubiquitous. Highly expressed in brain.
Detected on myeloid cells, but not T cells. Detected at lower levels in heart, placenta, lung, testis, ovary, colon, liver, levels in heart, placenta, spleen, kidney, skeletal muscle an
                                                                                                                                                                                                                                                                             stimulation with EGF, growth hormone, insulin and PDGF. Dephosphorylated by PTPN11.
SIMILARITY: Contains 2 immunoglobulin-like C1-type domains. SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBUNIT: Binds PTPN11 when tyrosine-phosphorylated, except in macrophages, where it primarily binds PTPN6. Binds GRB2 in vit Binds FGR (By similarity). Binds JAK2 irrespective of its phosphorylation status and forms a stable complex. Binds SCAP1 and/or SCAP2. The resulting complex recruits FYB. Binds PTK2B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of phagocytosis, mast cell activation and dendritic cell activation. CD47 binding prevents maturation of immature dendritic cells and inhibits cytokine production by mature dendritic cells.
                                                                                                                                                                                                                                                                                                                                                                                                   PTM: N-glycosylated.
PTM: Phosphorylated on tyrosine residues in stimulation with EGF, growth hormone, insuli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBCELLULAR LOCATION: Type I membrane protein. Sequence 392, Application US/09884441

Patent No. US20020119158A1

GENERAL INFORMATION:

APPLICANT: Algate, Paul A.

APPLICANT: Carter, Darrick

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE

TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER

FILE REFERENCE: 210121.462C7

CURRENT APPLICATION NUMBER: US/09/884,441

CURRENT FILLING DATE: 2001-06-18

NUMBER OF SEQ ID NOS: 489

SOFTWARE: FASTSEQ for Windows Version 3.0

SEQ ID NO 392

LENGTH: 309

TYPE: PRT

ORGANISM: Homo sapiens

US-09-884-441-392
                                                    APPLICANT: King, Gordon E.

APPLICANT: King, Gordon E.

APPLICANT: Algate, Paul A.

APPLICANT: Fling, Steven P.

APPLICANT: Fling, Steven P.

APPLICANT: Fanger, Marc W.

APPLICANT: Fanger, Gary Richard

APPLICANT: Reed, Steven G.

APPLICANT: Vedvick, Thomas S.

APPLICANT: Vedvick, Thomas S.

APPLICANT: Hill, Paul

APPLICANT: Albone, Barl

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE TITLE OF INVENTION: AND DIAGNOSIS OF OVARIAN CANCER

FILE REFERENCE: 210121.462C8

CURRENT APPLICATION NUMBER: US/09/907,969

CURRENT FILING DATE: 2001-07-17

NUMBER OF SEQ ID NOS: 596
